Profile

Senior Software Engineer with extensive experience in designing and delivering high-performance backend services for large-scale, cloud-native applications. Strong background in computer science, with specialization in web and distributed systems. Proficient in developing RESTful APIs and event-driven architectures using Java/Kotlin (Spring Boot) and C# (.NET Core). Also experienced in full-stack development, utilizing modern JavaScript frameworks (e.g., React or Angular) to build user-friendly interfaces that consume the developed RESTful APIs. Skilled in applying observability, CI/CD, and DevOps practices with Docker, Kubernetes, and cloud services (AWS). Passionate about scalable design, clean architecture, and building innovative solutions that bridge technology and real-world impact.

Education

Amazonas Federal University

Bachelor's degree, Computer Science · (2011 - 2015)

Skills

Programming Languages: Kotlin, Java, C#, Typescript

Frameworks & Technologies: Spring Boot, .NET Core, Docker, Kubernetes, React, Angular

DevOps & CI/CD: Jenkins, AWS Pipeline, GitLab CI, GitHub Actions

Databases: Postgres, MySQL, DynamoDB, Redis, SQL Server

Methodologies: Event-Driven Architecture, Domain-Driven Development (DDD), Agile

Experience

Condor

Fullstack Developer

Jun 2026 - Present | Lisbon, Portugal

Contributing as a backend/fullstack developer to the migration of Condor's payment backend from a legacy platform (proxying Amadeus and other providers) to a new architecture built on Java 25 and Spring Boot 4, integrating modern payment providers such as Apple Pay. Built traffic-replay testing tooling to validate functional parity between the legacy and new systems, and also used new Java virtual threads to control concurrency at scale. Delivered production features for the new Condor Commerce website within a Scrum team, participating in refinements, retrospectives, and sprint planning.

Stack: Java 8 & 25, Spring Boot, Angular v21, TypeScript, Karma, PostgreSQL, Jenkins, GitHub Actions, Splunk, AWS ECS

Stack: Java 8 & 25, Spring Boot, Angular v21, TypeScript, Karma, PostgreSQL, Jenkins, Github Actions, Splunk, AWS ECS

Bose

Tech Lead & Fullstack Developer

Jan 2025 - Jun 2026 | Lisbon, Portugal

Led backend and full-stack development for Bose's global e-commerce platform, supporting regional websites across markets in the UK, Italy, India, Japan, Korea, and others. Drove the migration of the user authentication system from SAP Gigya to Azure B2C, ensuring compatibility with the existing US platform while improving security and scalability. Collaborated closely with global stakeholders, including a product owner in the US and developers in India, to align delivery with business priorities and maintain efficient communication across time zones.

Modernized legacy components by upgrading Spring Boot, Adobe Experience Manager (AEM), and Node.js versions to improve performance and ensure long-term stability. Developed and maintained backend services using Spring Boot, with AWS DynamoDB for data persistence and Kafka for asynchronous event processing. Utilized Jenkins for CI/CD pipelines and Kibana for monitoring and troubleshooting. Conducted regular 1:1 sessions with contractors to provide technical guidance, ensure delivery quality, and support team growth.

Stack: Java 8, Spring Boot, AWS DynamoDB, Kafka, Adobe Experience Manager (AEM), Node.js, Jenkins, Kibana, Azure B2C, SAP Gigya, Github Actions, Kubernetes

Sky Portugal

Senior Java/Kotlin Backend Developer

Jan 2024 - Jan 2025 | Lisbon, Portugal

Developed and deployed features for large-scale applications, prioritizing performance and reliability. Led new initiatives, managing the full development lifecycle from requirements to production deployment. Contributed to software architecture, backlog grooming, and technical debt reviews within an agile environment (sprint planning, retrospectives, stand-ups). Implemented automated testing via Jenkins pipelines for quality assurance. Managed AWS deployments, focusing on scalability and fault tolerance. Provided on-call support and maintained system stability. Enhanced internal front-end tools using React for operations and monitoring.

Stack: Java 8/11/14, Spring Boot, AWS DynamoDB, Postgresql, RabbitMQ, Node.js, React, Jenkins, Kibana, Grafana, Kubernetes

Zup Innovation

Tech Lead & Specialist Java/Kotlin Backend Developer

October 2021 - December 2023 | Campinas, São Paulo

Designed and implemented a scalable, resilient microservices architecture for Itaú's Banking as a Service (BaaS) platform. Guided technical decisions and promoted best practices in design, testing, and deployment across teams. Used event-driven architecture and saga patterns to optimize complex workflows and improve reliability. Collaborated with stakeholders to align technical solutions with business goals. Implemented observability tools for better monitoring, efficiency, and incident response. Fostered technical excellence through architectural reviews and mentoring.

Stack: Java 11/17, Kotlin, Spring Boot, AWS (DynamoDB, SQS, SNS, EventBridge, RDS), Redis, Kafka, GitlabCI, Kibana, Grafana, Prometheus, Jaeger, Kubernetes, Terraform (IaC)

Java/Kotlin Backend Developer

November 2019 - October 2021 | Campinas, São Paulo

Developed core microservices for *iti*, Itaú's digital financial platform, covering features such as bill payments, transfers, and account management. Collaborated with cross-functional teams to design APIs, integrate third-party services, and ensure security and compliance standards. Delivered scalable, cloud-native solutions using agile methodologies and CI/CD pipelines. Contributed to technical documentation, code reviews, and knowledge-sharing sessions to promote consistent engineering practices. Encouraged continuous learning within

the team by organizing meetups and workshops.

Stack: Java 11/17, Kotlin, Spring Boot, AWS (DynamoDB, SQS, SNS, RDS), Redis, Kafka, GitlabCI, Kibana, Grafana, Prometheus, Jaeger, Kubernetes, Terraform (IaC)

Instituto Transire de Tecnologia e Biotecnologia da Amazônia

Full Stack Software Engineer

July 2018 - October 2019 | Manaus, Amazonas

Enhanced and maintained web and desktop applications to optimize production processes using the .NET Framework and Angular. Piloted the *Performa* project, building terminal-based and Windows Forms applications to support manufacturing operations and performance tracking. Designed and integrated backend services with web interfaces to enable real-time data monitoring and analytics. Collaborated closely with production engineers to translate operational needs into practical software solutions. Improved process efficiency by automating manual workflows and implementing data-driven insights for decision-making.

Stack: .NET Framework, Angular, Windows Forms

Languages

Portuguese: Native

English: Professional working proficiency (strong communication skills)
